

PHP Exercise

Task: Write a PHP script that prints a single sentence containing all of the following:

- A **string** variable (e.g., your name)
- An **integer** variable (e.g., your age)
- A **float** variable (e.g., your height)
- A **boolean** variable (e.g., whether you are a student)
- An **array** variable with at least 2 elements (e.g., favorite programming languages)

Example sentence structure:

"My name is [name], I am [age] years old, my height is [height] 'meters', it is [true/false] that I am a student, and my favorite \programming languages\ are [first programming language] and [second programming language]."
