

PHP Class Exercise: Car

Instructions:

Write a PHP script embedded in this HTML page to demonstrate the concepts of *class*, *instance*, *properties*, *methods*, *\$this*, *__construct*, and *__destruct*.

Requirements:

- Create a class called `Car`.
- Give it at least two properties, e.g., `$brand` and `$color`.
- Write a **constructor** that initializes the properties and prints a message like "Creating car: [brand]".
- Write a method `display()` that returns an HTML block showing the car's brand and color.
- Write a **destructor** that prints a message like "Destroying car: [brand]".
- Create two instances of `Car` with different brands and colors.
- Call the `display()` method for each instance to show their information on the page.
